

Round 1 Assignment

SECTION 1: Website Exploration & Manual Testing

Target Website: <https://aivoa.ai/>

Your Task: Explore the website and manually test its pages, forms, navigation, UI/UX, validations, and overall functionality. Look for bugs, UI inconsistencies, usability issues, broken links, or general areas for improvement.

Deliverable 1: Testing Document Document your findings using Google Sheets, Excel, Notion, or any structured format.

- **Include:** Test cases, reproduction steps, expected vs. actual behavior, screenshots, and general observations.
- **Focus:** We care more about your logical thinking, attention to detail, and overall approach than the sheer number of test cases you write.

Deliverable 2: Video Demonstration (5–8 mins) Record a short screen-share video showing how you explored the site, the issues you found, and your thought process. *(Face visibility is optional)*. **(Mandatory task)**

SECTION 2: Understanding QMS Workflow

Context: AIVOA.AI builds software for pharmaceutical and life sciences workflows.

Your Task: Briefly explain how pharmaceutical manufacturers use Quality Management System (QMS) workflows in their daily operations.

- **The Approach:** Choose a **real-world example** of an API (Active Pharmaceutical Ingredient) and an FDF (Finished Dosage Form). Walk us through how a manufacturer would use QMS modules—such as Deviations, CAPA, quality checks, or recalls—during the lifecycle of those specific products.

Deliverable 3: Workflow Explanation

- **Format:** Create a PPT, flowchart, diagram, document, or even handwritten notes to illustrate this workflow using your chosen examples.

- **Video Demonstration:** Briefly include this explanation in your 5–10 minute video. Tell us how you researched and learned the concepts. *(Mandatory task)*
- **Focus:** Don't stress—we do not expect you to have prior domain expertise! We just want to see how you learn and apply new concepts to real-world scenarios.

⚠ **Important Note on AI Usage:** You are encouraged to use AI tools like ChatGPT or Gemini, but strictly for **research purposes only**. Your final explanation, documents, and video presentation must be your own original work and reflect your personal understanding.

Submission & Deadline

Please submit all your files within **24 hours** of receiving this assignment.

What to submit:

1. Your testing document
2. Your QMS workflow file
3. The link to your video recording

👉 **Submit here:** <https://forms.gle/JziEu8mKNcmUmwoX7>

Note: Submissions with unattempted sections will not be evaluated. Please ensure you complete both Section 1 and Section 2.
